CARTON SEALERS

COMBI PACKER 50 SB - 50E SB

A combined machine, semi-automatic and manual dimensioning carton sealer with automatic arch strapping machine. Box feeding is regulated by two lateral belts controlled by two motors, ensuring the maximum sliding uniformity. The result is a perfect alignment of box flaps and optimum sealing, thanks to the efficient taping head. The machine can be programmed for box taping/taping and strapping or taping and two strapping in parallel. The strapping distance can be adjusted by regulating the photocells placed on slide guides. It can be used by non-specialized operators because the machine requires simple adjustment operations. Machine is equipped with infeed rollers, blade to stop the box and wheels, representing a practical and simple packaging station.
